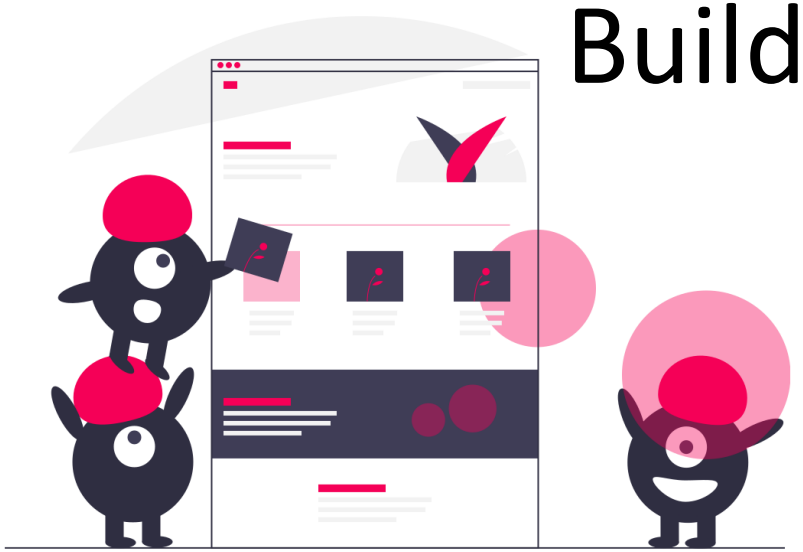
React JS

Build Rich User Interfaces



About Me

- Integrated Masters in Software Engineering – Andhra University College of Engineering.
- Co-founder, Prasanta Communications.
- Full-Stack developer.
- More at insidert.com

What’s for today

- Traditional web apps & Modern web apps.
- Need for rich user interactivity.
- Mental Models of Components.
- Building a UI with React.

Client - Server

Traditional Web Apps

- Simple textual, image elements with styling.
- Hyperlinks to move from one document to another.
- Least Interactivity.

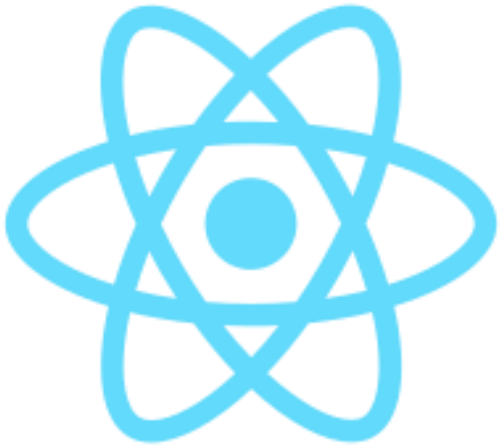
Modern Apps

- Handle data dynamically.
- Less page refreshes. (SPA)
- Create an engaging experience.
- Animations.
- Good Stylings.

Need for Dynamic Interactions

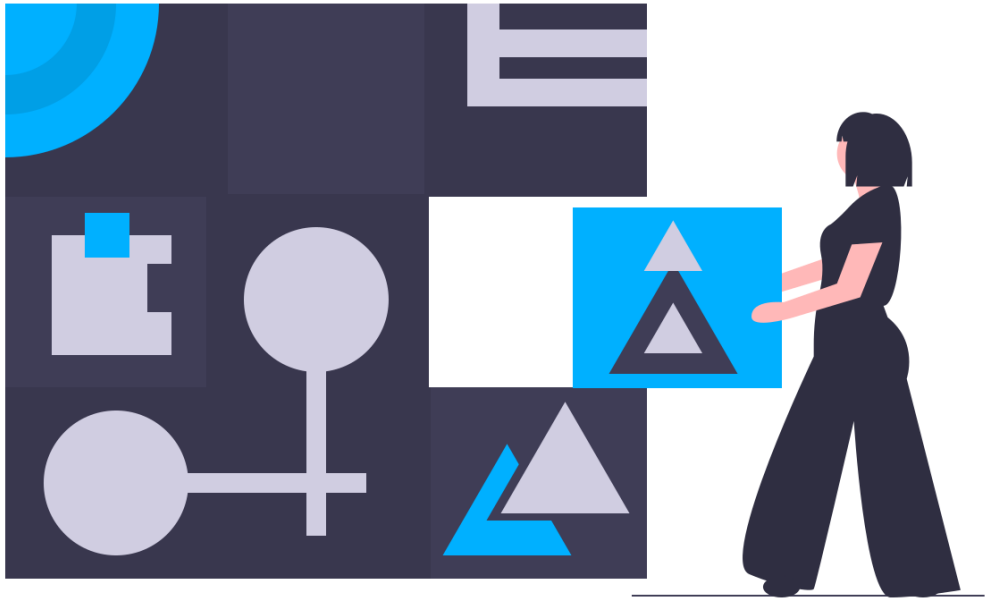
- You click on a button:
  - Something is shown/hidden.
  - Something is added/removed.
  - Something is updated.
  - Progress bars.
  - Success messages.
  - Alerts.
  - Popups.

Modern Frameworks



Mental Models

Perspective to Understand JavaScript Frameworks

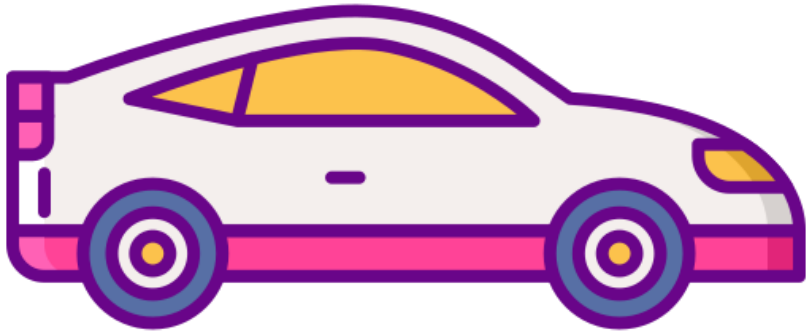


Imagine the world in components

Anything can be viewed as an independent component or a component of components.

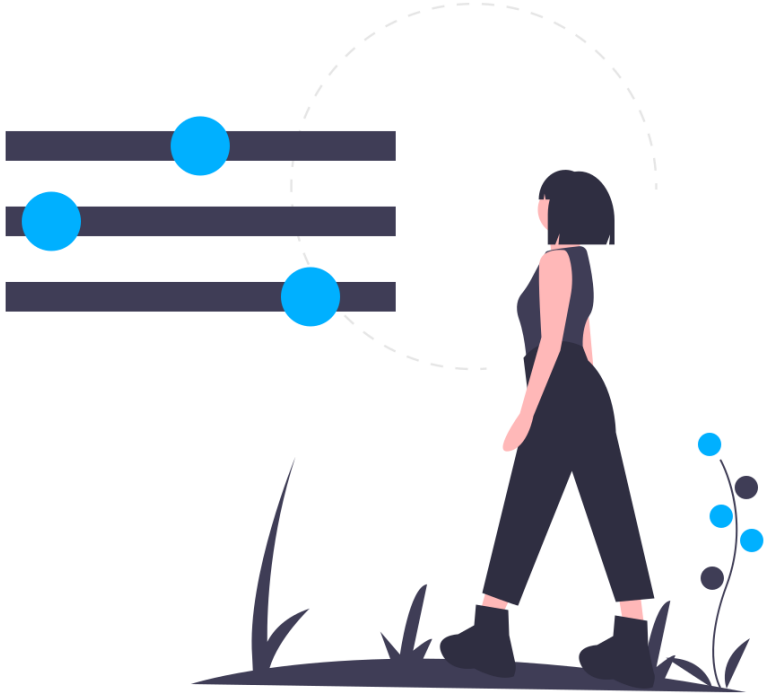
Components of a Car

- Chassis
- Engine
- Batteries
- Doors
  - Windows
  - Speakers
- Seats
  - Adjustments
- Dashboard
  - Odometer
  - AC Controls
  - Music Controls
- Wheels
- Lights



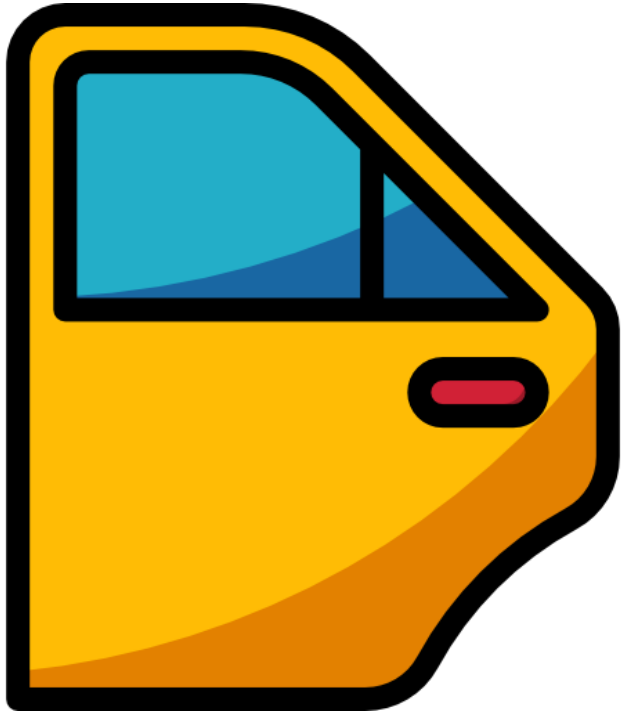
Components holds three things

- The State.
- Some functions to execute based on user interactions.
- Wrap other components.



Car Door Component

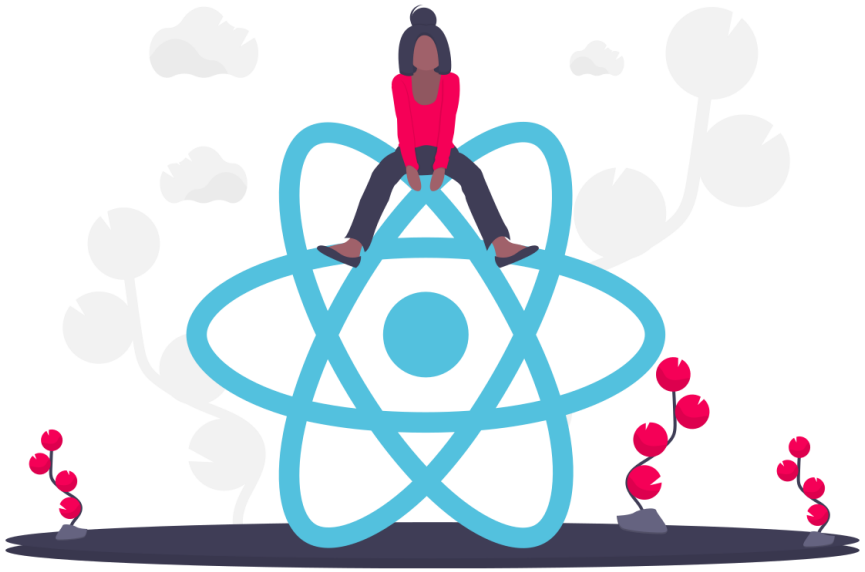
- State
  - Closed
  - Opened
- Functions
  - Close the door
  - Open the door
  - Lock the door
- Sub-components
  - Window
  - Speakers



Components of a Web page

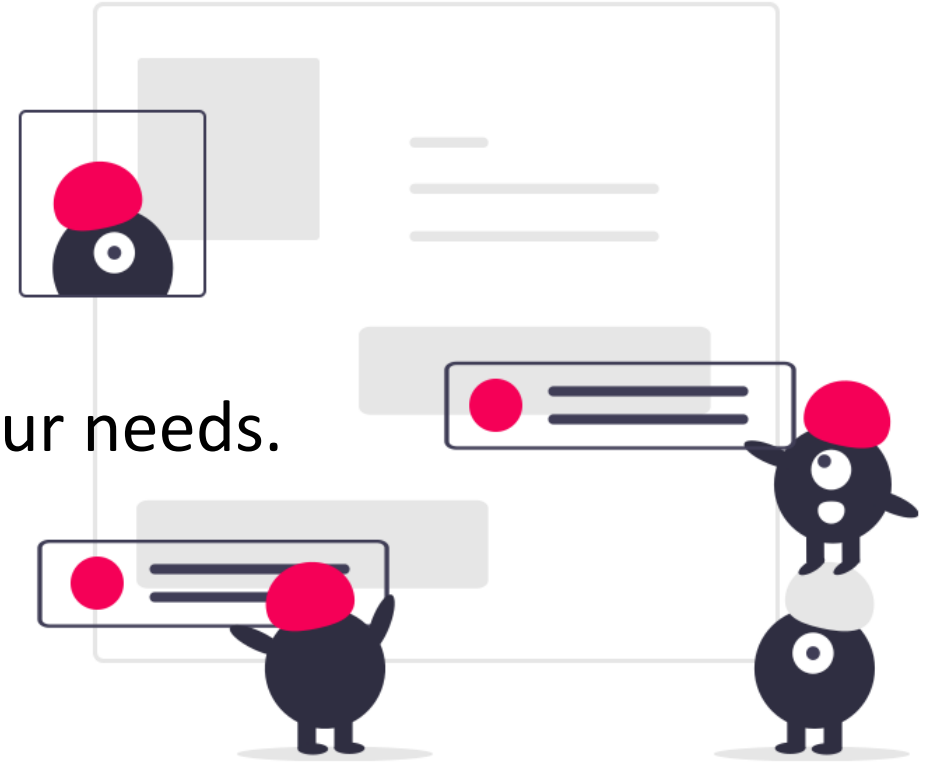
- Navbar
  - Menu
- Sidebar
  - Menu
  - Lists
- Feed
  - Posts
- Ad
- Footer

Let’s use React to React



My Opinion

- Design an interaction experience first.
- Code to build the experience.
- Mix traditional & modern approaches.
- Evaluate which approach suits best to your needs.



At the end,
We always remember the experiences!

Thank you.
